MONITORING AND MANAGED SERVICES

Whether you are experienced with DDoS protection or not, Corero SecureWatch Managed Services let you outsource all, or a portion of your SmartWall One deployment to our team of experts – so you can focus on what you do best.

SecureWatch Managed Services are a suite of configuration optimization, monitoring and protection response services. This round-the-clock service is delivered by our highly experienced security operations center and is tailored to meet the security policy requirements and business goals of each SmartWall One customer that engages in a SecureWatch managed service plan.

With SecureWatch Managed Services, our SmartWall One customers receive expert DDoS services 24 x 7 x 365, including an organization-specific implementation, round-the-clock monitoring, and immediate, effective protection and response in the event of an attack.

SMARTWALL ONE REAL-TIME DDoS PROTECTION

Corero SmartWall One leads the industry with automatic, protection that keeps DDoS attacks at bay, without any of the downtime associated with other solutions.

The platform uses a patented, innovative and automated, multi-stage detection and protection pipeline to ensure the highest possible efficacy. Protection is achieved while maintaining line-rate performance, to ensure legitimate traffic is not impacted by damaging false-positives, or a significant increase in latency.

SecureWatch Managed Service ensures protection is up-to-date, based on the latest DDoS threat intelligence from the SecureWatch team and that all attacks are actively monitored to ensure optimal protection.

AUTOMATIC RESPONSE

Detection and protection in seconds, rather than the minutes or tens of minutes taken by legacy solutions, ensuring online business continuity.

AUTOMATIC PROTECTION

Accurate automatic protection delivers lowest TCO and enables your IT and security teams to spend more time defending against other threats.

CLEAR, ACTIONABLE INTELLIGENCE

Comprehensive visibility with reporting and alerting for actionable intelligence on DDoS attack activity across the network.

HIGHLY SCALABLE

Flexible and highly scalable deployment options from the latest infrastructure-based enforcement, to inline and cloud.
SmartWall One SecureWatch® Visibility

Inbound Traffic

Block Rate by Attack Vector

For all SmartWall One deployments, SecureWatch analytics shows the size, volume and type of packets in each attack, with granular visibility into every DDoS vector used, right down to the data in the packets themselves, if needed. Our SecureWatch team uses this to monitor attacks as they happen, and provide detailed analysis and reporting on each attack.
